Faces of Science: Amy Clarke

March 4, 2015

Minerals to new materials and metallurgy keeps Amy motivated

Amy Clarke grew up in the “Copper Country” in Michigan, where she was first exposed to metallurgy and materials science when she attended Michigan Technological University and later graduate school at the Colorado School of Mines.

Faces of Science: Amy Clarke

The cumulative experience and the people at these universities ignited Amy’s passion for materials science.

Today, she performs X-ray and proton imaging of materials during processing to watch and influence microstructure and property development in real time.
