Title: Transuranic Liquid Waste (TLW) Project

## Description of Product or Service Required

The Transuranic (TRU) Liquid Waste (TLW) Project is a congressionally funded line item project to provide TRU liquid waste treatment capability to replace the current operation at Los Alamos National Laboratory (LANL). LANL is considering either a design-build or design-bid-build approach. As such, LANL is looking for interest in design only, design-build, and construction only. Based on the selected approach, the Request for Proposal (RFP) for design only or design-build is expected to be issued October 2019. Construction is expected to start in October 2020. NQA-1 qualification is required.

- Current forecasted bid opportunities are subject to change or cancellation due to scope, mission, or funding requirements.
- Some procurements are reserved for small businesses. Note the competition type on the forecast matrix to determine if a procurement has been set aside or is open to fair and reasonable competition.
- LANL reserves the right to change the competition type from Competitive to Set-Aside prior to the release of the Request for Quotation (RFQ).
- If this is a Request for Expression of Interest and capability information is requested with your response, be advised that LANL will not issue your organization a Request for Quotation unless you submit clear and convincing information that your organization has the necessary relevant experience and can fulfill the requirements of the statement of work. If you do not adequately address the required information, and the LANL Buyer does not have information indicating otherwise, the presumption will be that your organization is not a viable competitor. In any case, the LANL Buyer is the final arbiter on who receives an RFQ.
